Credit Highlights

Overview

Key strengths

Among the world's largest wheel manufacturers.
A wide geographic footprint provides cash-flow protection.
Comfortable liquidity position with an extended debt profile and available revolving credit facility (RCF).

Key risks

Weaker global demand amid geopolitical tensions.
U.S. tariffs might jeopardize volumes and margins in the North American division.
High interest rate in Brazil could weaken volume expectations.

We currently forecast smoother revenue expansion in the coming years from weaker volumes globally. Our forecast assumes the production of light vehicles in Brazil will expand by about 8% in 2025, while the production of heavy vehicles will remain stable versus last year. This aligns with the Brazilian National Association of Automotive Vehicle Manufacturers (ANFAVEA), which released the January-February 2025 production data indicating a growth of 15.1% in light vehicles production and 10.5% of heavy vehicles versus the same period last year.

We believe the sustained high interest and inflation rates domestically could pose risks to such growth expectations, but a recovery of exports to other Latin American countries would balance it. Altogether considering lochpe's mix of commercial and light vehicles exposure should

translate in modest revenue growth at its Brazilian operations of about 1.5% in 2025, and for 2026-2027 we expect 3.0%-3.5%, considering easing of interest and inflation rates supporting stronger vehicles sales.

In North America, we expect mild recovery in light vehicles volume with the easing of interest rates, but it will be weaker than historical levels due to macroeconomic uncertainties and the trade tariffs. On the other hand, we expect the volume of commercial vehicles in the U.S. to remain constrained, and pre-buy movements are expected for 2026 due to regulatory changes to become effective in 2027.

With a weaker 2024 as a starting point to our current forecast, we believe volumes in Europe will recover modestly in 2025, also considering lochpe's exposure to Türkiye, which should maintain good growth prospects. Still, the company may benefit from higher volumes in the market due to capacity closure in Germany from a competitor.

We expect continued focus on cost management and pricing efforts to result in gradual margin expansion in the coming years. lochpe generated an EBITDA margin of 10% in 2024, in line with our previous expectations, reflecting operational efficiencies, pricing strategies, and a stabilization of raw material prices last year. We continue expecting margins above 10% over the next three years, from demand recovery, commercial strategies, and cost management. Key risks stem from raw-material price swings, as pass-through takes two to three months to be implemented and especially because of the U.S. tariffs, which will directly impact lochpe's North American operations due to lower volumes.

We expect controlled leverage and comfortable liquidity in the coming years. lochpe posted debt to EBITDA of 3.3x at the end of 2024, higher than our previous expectations of 2.8x, but mainly due to the Brazilian real's depreciation. We expect this metric to reach 2.5x by the end of 2025--although slower than we initially expected due to the real's deep depreciation and the weaker cash generation from international operations. We expect lochpe to continue balancing debt position and cash generation among regions, to reduce currency mismatch risks.

Moreover, as seen in the beginning of this year with the issuance of 15th senior unsecured debentures of R\$500 million (proceeds and existing cash position were used to paydown the 12th debentures of R\$700 million), we expect further liability management and debt reduction with internal cash generation. As of December 2024, lochpe had a cash position of R\$2.5 billion and short-term debt of R\$614.7 million.

S&P Global Ratings believes there is a high degree of unpredictability around policy implementation by the new U.S. administration and possible responses--specifically with regard to tariffs--and the potential effect on economies, supply chains, and credit conditions around the world. As a result, our baseline forecasts carry a significant amount of uncertainty. As the situation evolves, we will gauge the macro and credit materiality of potential and actual policy shifts and reassess our guidance accordingly (see our research here: spglobal.com/ratings).

Outlook

The stable outlook reflects our view that lochpe will continue benefiting from its broad geographic diversification, balancing various industry dynamics in the coming years. We expect continued efforts to improve profitability and cash generation will offset the impact of persistently high interest rates in Brazil. In turn, we forecast controlled leverage in the coming years with debt to EBITDA of about 2.5x by year-end 2025 and free operating cash flow (FOCF) to debt of 15%-20% in the next two years.

Downside scenario

A negative rating action is unlikely in the short to medium term. But it could occur if the company fails to improve profitability and reduce leverage because of tougher global industry dynamics, with lower demand and higher inflation weighing on costs and expenses. Moreover, this could result from elevated interest rates globally, crimping credit availability and household income. In this scenario, we would see debt to EBITDA consistently close to 3.5x and negative free cash flow.

Upside scenario

A positive rating action is also unlikely in the next 12-18 months, since in our view it will depend on the company having a comfortable liquidity cushion and less volatile credit metrics through the cycles. In this scenario, we would have to see debt to EBITDA consistently below 2.0x and FOCF to debt above 15%.

Our Base-Case Scenario

Assumptions

- Average foreign exchange (FX) rate of R\$5.87 per US\$1 in 2025, and R\$5.85 per US\$1 in 2026 and 2027.
- Brazil's inflation rate of 5.2% in 2025, 4.7% in 2026, and 3.8% in 2027.
- Brazil's GDP growth of 1.9% in 2025 and 2.0% in 2026-2027.
- Brazil's average basic interest rate of 14.6% in 2025, 13.1% in 2026, and 10.4% in 2027.
- U.S. inflation of 2.8% in 2025, and 2.2%-2.3% in 2026-2027.
- U.S. GDP growth of 1.6% in 2025 and 1.9% in 2026-2027.
- EU's inflation of 1.4% in 2025 and 1.7% in 2026-2027.
- EU's GDP growth of 1.4% in 2025, and 1.7% in 2026 and 2027.
- We expect consolidated revenue growth of 8.5%-9.5% in 2025-2026, as the depreciation of the real offsets the still depressed volumes in North America and Europe, while volumes in Brazil to expand in line with the market.
- Continued efforts on cost management and pricing initiatives to support EBITDA margin above 10% in the coming years.
- Capex of about R\$540 million in 2025, and R\$700 million – R\$750 million in 2026-2027, of which we estimate 50% for maintenance of operations, and 50% for expansion of production and operational improvements.
- Expansion in capex is related to Türkiye's new facility for aluminum wheels for heavy vehicles.
- Dividend payout at 37% of previous year's net income (in line with company's bylaws) and R\$100 million – R\$150 million annually to minority shareholders of Turkish and Indian operations.

Company Description

Founded in 1918, lochpe is a global manufacturer of steel wheels for light and commercial vehicles and agricultural machinery. It also manufactures aluminum wheels for light vehicles; side rails, crossmembers, and full frames for commercial vehicles; and structural components for light and commercial vehicles.

lochpe currently has 33 manufacturing facilities across 14 countries. The company operates its core business through Maxion Wheels and Maxion Structural Components in the auto segment, and through AmstedMaxion, which produces railway equipment in Brazil and other countries.

Peer Comparison

We view Tupy S.A. (global scale: BB+/Stable/--; national scale: brAAA/Stable/--) as lochpe's main peer among Brazilian auto suppliers, although the companies are not competitors. Tupy is the leader in the production and commercialization of cast-iron engine blocks and cylinder heads in the Americas and Europe. It also operates in the hydraulic segment, producing pipe fittings and iron bars. Compared to lochpe, Tupy has limited production based on a lower number of plants worldwide. However, Tupy has increased its product, services, and client diversification following recent mergers and acquisitions.

lochpe's portfolio consists of two segments: wheels and structural components, while Tupy has power generators, maritime engines, increased aftermarket exposure, assembly of engines, beside producing and commercializing cast-iron engine blocks and cylinder heads. Both companies have similar scales and profitability. On the other hand, Tupy has historically maintained much lower leverage with debt to EBITDA consistently below 2.5x.

Both Nemark S.A.B. de C.V. (BB+/Negative/--) and Metalsa S.A. de C.V. (BB+/Stable/--) are Mexican auto suppliers, with Metalsa's portfolio similar to that of lochpe. It manufactures structural components in nine countries through 12 facilities, including chassis and side rails, but given greater portfolio of services, it enjoys higher average margins. Both Mexican peers have demonstrated lower leverage than lochpe in the past years.

Liquidity

lochpe's liquidity is adequate, in our view. We expect lochpe to sustain a comfortable liquidity position with sources of cash to exceed uses by about 2.3x in the next 12 months, and sources minus uses to remain positive even if EBITDA were to decline by 15% from our current forecast. We believe the company has sound relationship with banks in all the regions where it operates, proven by its long relationship with large Brazilian banks and BNDES, and satisfactory standing in the domestic credit market with a long track record of issuing debentures.

We expect lochpe will maintain a comfortable cash position in the coming years, and we believe it will continue partly pre-paying its receivables, improving its working capital generation. Moreover, it has a RCF of \$550 million, which provides greater liquidity comfort.

Principal liquidity sources

- Cash position of about R\$2.5 billion as of December 2024.
- Undrawn committed credit lines of \$550 million, maturing in 2027.
- Forecasted funds from operations of about R\$1.2 billion in 2025
- The issuance of 15th senior unsecured debentures of R\$ 500 million.
- Recently signed R\$357.3 million Finep credit line, available to be disbursed.

Principal liquidity uses

- Short-term debt of R\$614.7 million as of December 2024.
- Pre-payment of the 12th debentures totaling R\$700 million in March 2025.
- Working capital needs of about R\$150 million in 2025.
- Capex of about R\$540 million in 2025.
- Dividend payment of about R\$140 million in 2025.

Covenant Analysis

Requirements

The company can't incur additional debt or distribute dividends above 37%, if net debt to EBITDA is above 3.5x. This incurrence covenant is present on the sustainability-linked notes. The company has no debt-payment-acceleration financial covenant.

Compliance expectations

We forecast the company will have a cushion of over 50% on the covenant for the next two years.

Environmental, Social, And Governance

Environmental factors are a negative consideration in our credit rating analysis of lochpe. This is because the global auto industry is significantly exposed to environmental risks, given that electrification and the transition to carbon-dioxide-neutral mobility are disruptive forces that will shape the industry. lochpe has been working on weight-reduction technology to meet original equipment manufacturers' needs. Nevertheless, the company is the global leader in wheel manufacturing, which is less vulnerable to the global regulatory push. lochpe has been reporting progress toward its carbon neutrality goals, reducing approximately 38% of the intensity of greenhouse gas emissions in Scopes 1 and 2, compared to the base year of 2019. In addition, the company reached 75% of the use of electricity from renewable sources. The goal is to scale up the use of renewable electricity to 90% by 2030 and reduce CO2 emissions by 70%.

Issue Ratings--Recovery Analysis

Key analytical factors

- The recovery rating on lochpe's senior unsecured debentures is '4', with a recovery expectation of 35%. The recovery rating on company's senior unsecured notes is '3', with a recovery expectation of 65%. The higher recovery expectation on the senior notes issued by lochpe-Maxion Austria GmbH and Maxion Wheels de Mexico reflects our view that this debt would rank superior in the event of default versus the debt at the parent level.
- We assess recovery prospects using a simulated default scenario, with an EBITDA multiple valuation approach.
- Our simulated default scenario assumes a payment default in 2030 because of a severe global economic slowdown, sharply lower consumer discretionary income, and higher competition, all of which would reduce its cash flow.
- We analyze recovery prospects under a going concern basis and use a 5x multiple to our projected emergence EBITDA because we believe the company would likely be restructured instead of being liquidated in the event of default. This gives its strong position among auto suppliers and its solid operations that should generate consistent cash flows.
- In such a scenario, we estimate that EBITDA would decline about 40% from 2024 reported EBITDA and wouldn't sufficiently cover the company's maintenance capex and interest expenses, triggering a payment default.

Simulated default assumptions

- Simulated year of default: 2030
- Emergence EBITDA: R\$953.5 million
- EBITDA multiple: 5x
- Estimated gross enterprise value (EV): R\$4.8 billion
- Jurisdiction: Brazil

Simplified waterfall

- Consolidated net EV after 5% administrative costs: R\$4.6 billion

lochpe-Maxion S.A.

- Net EV of its subsidiaries: R\$2.7 billion
- Unsecured debt of the subsidiaries: R\$2.9 billion (bank loans, senior notes)
- Recovery expectations of senior unsecured notes: 65% (jurisdiction cap)
- Net EV of lochpe-Maxion S.A. (parent company): R\$1.8 billion
- Secured debt: R\$990 million (Finame and BNDES)
- Unsecured debt: R\$2.7 billion (bank loans and debentures at the level of the parent)
- Recovery expectations of lochpe-Maxion's debentures: 35%

All debt amounts include six months of prepetition interest.

*Unless otherwise noted, all ratings in this report are global scale ratings. S&P Global Ratings' credit ratings on the global scale are comparable across countries. S&P Global Ratings' credit ratings on a national scale are relative to obligors or obligations within that specific country. Issue and debt ratings could include debt guaranteed by another entity, and rated debt that an entity guarantees.

No content (including ratings, credit-related analyses and data, valuations, model, software or other application or output therefrom) or any part thereof (Content) may be modified, reverse engineered, reproduced or distributed in any form by any means, or stored in a database or retrieval system, without the prior written permission of Standard & Poor's Financial Services LLC or its affiliates (collectively, S&P). The Content shall not be used for any unlawful or unauthorized purposes. S&P and any third-party providers, as well as their directors, officers, shareholders, employees or agents (collectively S&P Parties) do not guarantee the accuracy, completeness, timeliness or availability of the Content. S&P Parties are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, for the results obtained from the use of the Content, or for the security or maintenance of any data input by the user. The Content is provided on an "as is" basis. S&P PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

Credit-related and other analyses, including ratings, and statements in the Content are statements of opinion as of the date they are expressed and not statements of fact. S&P's opinions, analyses and rating acknowledgment decisions (described below) are not recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P assumes no obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P does not act as a fiduciary or an investment advisor except where registered as such. While S&P has obtained information from sources it believes to be reliable, S&P does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives. Rating-related publications may be published for a variety of reasons that are not necessarily dependent on action by rating committees, including, but not limited to, the publication of a periodic update on a credit rating and related analyses.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P reserves the right to assign, withdraw or suspend such acknowledgment at any time and in its sole discretion. S&P Parties disclaim any duty whatsoever arising out of the assignment, withdrawal or suspension of an acknowledgment as well as any liability for any damage alleged to have been suffered on account thereof.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P reserves the right to disseminate its opinions and analyses. S&P's public ratings and analyses are made available on its Web sites, www.spglobal.com/ratings (free of charge), and www.ratingsdirect.com (subscription), and may be distributed through other means, including via S&P publications and third-party redistributors. Additional information about our ratings fees is available at www.spglobal.com/usratingsfees.
